

1:25 Scale Ares I Cutaway Model

The 1:25 Ares I cutaway model details the inner workings of the Ares I crew launch vehicle. The Ares I is the flagship of NASA's new generation of safe, reliable and affordable space transportation systems. This new launch vehicle will be part of America's capability to transport explorers back to the moon and onward to Mars and other destinations in the solar system, supporting the U.S. Space Exploration Policy. Incorporating a three-screen video presentation, the exhibit is ideal for technical shows, space conferences, museums and other community events.

General Specifications

Footprint:

- 13' x 6'

Electrical Requirements:

- One 117 Volt 20 Amp drop

Special Notes

- This exhibit is suitable for indoor use only

Assembly Specifications

Assembly Equipment Required:

- Forklift for pallets
- Dolly for model case
- Various hand tools (included in model case)

Labor Required:

- Two people

Assembly Time:

- Approximately one hour

Assembly Notes:

- One Exhibit Technician and one laborer are required for setup of this exhibit
- Instructions for assembly/setup are included
